## TOBACCO PORTFOLIO CROP PROTECTION Sipcam Italy Update 2025

Alessandro Guarnone – SIPCAM ITALY R&D Dept.

**SIPCAM OXON**  
supporting agriculture

33

Offices around the world, of which 24 are branches and 9 are production plants

1300

People working in our business, development, administrative offices and production plants

40%

Overall growth recorded by the Group over the last 10 years

500

Total number of trademarks sold around the world

1946

Sipcam (*'Società Italiana Prodotti Chimici per l'Agricoltura Milano'*) was established: a company specialising

1970

Oxon was established, with the aim of producing the chemical synthesis for a number of active ingredients in-house

1974-2010

We opened facilities in Italy and abroad and developed our business in Europe, USA, Australia and China

2011-2014

We developed a diversified portfolio adding biostimulants, specialty fertilisers and biorationals

2016

We celebrated Sipcam's first 70 years

2018

Sipcam merged with Oxon, creating the parent company, Sipcam Oxon

2019-

Sofbey acquisition. Further international expansion

## OUR HISTORY

# A range of innovative solutions

## Agrochemicals

We make products to protect and care for crops (herbicides, fungicides, insecticides).

## Biological products

We develop products of biological origin to protect plants (microorganisms, macro-organisms, semiochemicals and botanicals).

## Biostimulants

We develop products that stimulate natural processes to improve the absorption of nutrients, tolerance to abiotic stresses and crop quality.

## Growth regulators

We produce organic substances that can boost or inhibit plants' physiological processes.

## Fertilisers

We make products, mainly of natural origin, that are able to nourish plants and nurture their growth, for better results.

## Seeds

We are specialised in processing and supplying seeds, especially soybean, corn, sunflower and pea.

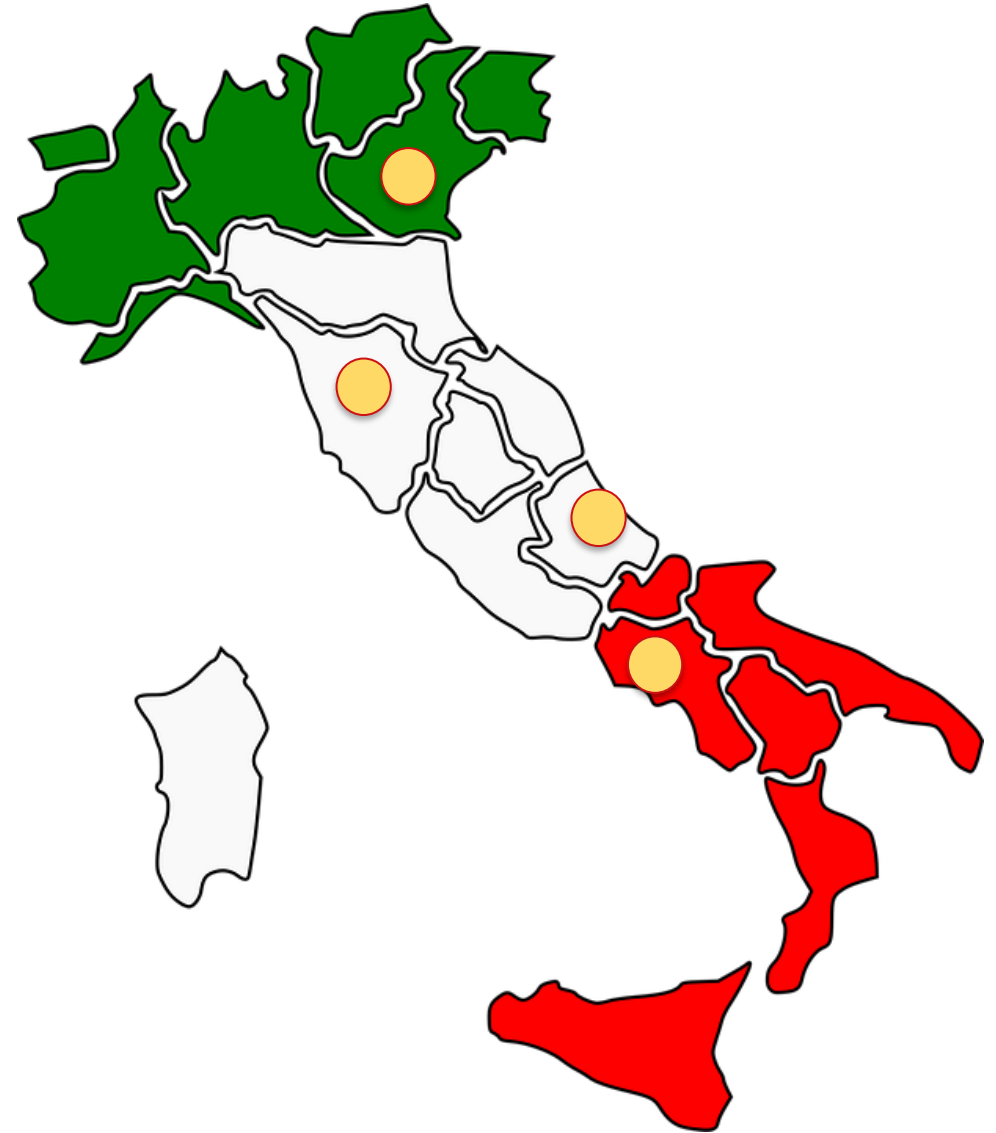

## Chemical intermediates

We produce substances such as methanesulfonic acid and methanesulfonyl chloride for chemical companies, designed to be transformed into compounds through chemical processes.
